

Streamlined Workflow

Using a standard interface with familiar workflows to maximize productivity, users make the application work for them, not against them. With useful, relevant data cross-referencing, the ability to click-through, drill-across, refresh data and document views with a single click, users quickly and efficiently retrieve pertinent information.

Modules and Features

DynaStar's modular design provides companies with the tools they need to oversee the operations of multiple divisions within a single company, all from a single database. The unique features simplify asset, procurement and maintenance management.

Asset and Materials Management

Covering all aspects of asset and materials management, DynaStar handles managing assets, inventories, vendors, in-house labour, outside contracting, procurement and maintenance processes including planning and budgeting, preventive, corrective and emergency maintenance, scheduling, purchasing and inventory.

Procurement Management

Use Just-In-Time methodologies to hold only the inventory required for maintenance and production activities, thereby removing the need for excessive warehouse space. Procurement management includes all aspects of parts, inventory, purchasing and budgeting.

Work Management

Covering a wide range of activities from budgeting, work requests and orders, preventive and corrective maintenance, parts and material costs, DynaStar's Work Management system saves costs and delivers improved performance.

Security, Auditing and Reporting

Simple, yet powerful tools allow managing user access and privilege levels. DynaStar's intuitive privilege system and layered approach form the backbone of the role based security model. Auditing records changes to inserts, updates and deletions for any database table.

On Demand Analysis

Real time integration to your facility's machines allows for the monitoring of Key Performance Indicators (KPI) and on demand analysis of metered thresholds. Notifications alert users to issues potentially requiring attention.

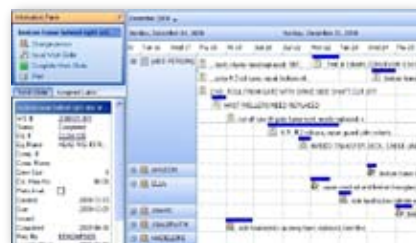

Note: USNR continually adds new features to enhance our products, based on customer requests. Our closeness to our customers' needs and attention to the demands of the marketplace keeps us in the forefront of wood processing technology. Because of that, please note that the specifications for our products will change rapidly as we improve our systems further.

DYNASTAR MAINTENANCE

Over 400 standard reports are included.

Schedule, prioritize, and convert planned, preventive, corrective and condition based maintenance tasks into work orders to ensure the monitoring of all assets to extract maximum value.

Take it with you. Mobile management software allows greater control over inventory and keeps maintenance costs to a minimum by making inventory counting, part disbursing, and meter reading faster, easier, and more reliable than ever before.

Millwide. Worldwide.
